

Health & Beauty Conveyors & Equipment

Bi-Directional Accumulation
Table

Re-Flow Accumulation
Table.

First-in, Last-out Vertical Accumulator designed to Accumulate rows of hair care carton packaging.

Nercon has engineered and manufactured a variety of laned conveyor systems as well as high speed merging conveyors for the health and beauty industry.

Consumer buying trends and retail marketing drive the health and beauty industry toward creative packaging. Some of these creative packages are odd shaped and require expertise in conveying. Nercon has the expertise in handling all types of packaging in the health and beauty industry from soap and lipstick to hair care products and deodorant.

Nercon has engineered various types of equipment to handle the small cartons and PET containers found in the Health and Beauty industry including pressureless combiners, re-flow and bi-flow accumulation tables, vertical and serpentine accumulators, alpine conveyor systems, gripper elevators, product reorienters, packing stations and merging and diverting conveyor systems.

For small bottles and lightweight products, Nercon has engineered hopper systems, cleated inclines, sweep accumulation tables and rotary unscrambling tables.

Another category of product shapes in the health and beauty industry are tapered tube and non-round or non-uniform packages. Many of these types of products are conveyed using pucks. The use of pucks allow irregular products to be conveyed and handled in standard systems such as accumulation equipment, single filers and transport conveyors. Nercon also has advanced expertise in puck loading and unloading. We have designed pucking devices using pneumatic pushers as well as servo-drive technology.
