## Nercon's Case Elevators Offer Design Flexibility and Dependable Performance

Nercon's **Case Elevator** is built for dependable performance. In over 30 years of experience in conveyor and equipment manufacturing, Nercon's case elevators can be seen in the food, packaging, beverage, household, paper and light industrial markets, just to name a few.

The high bay areas at Nercon combined with expertise in material handling design, gives Nercon the capability to build Case Elevators over two stories high (lower left photo.)

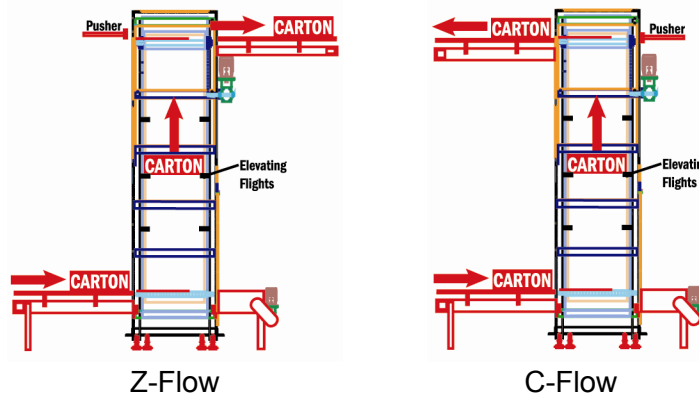

Case Elevators carry cartons or cases with two parallel flighted chains driven by a brake motor. The brake motor stops chain/flights to wait for cartons at the pick up area. The limit switch detects cartons and indexes upward.

This unit accommodates carton or case sizes according to customer specifications at up to 20 packages per minute.

Cartons are delivered through the infeed area before indexing. (right center photo.)

A single optional hand-wheel crank adjusts the unit to accommodate various product widths (lower right photo.)

Nercon's Case Elevator can be designed as a C-Flow or Z-Flow configuration
