

FOR IMMEDIATE RELEASE

## Nercon Showcases Angled Roller Belt Technology At Pack Expo – Las Vegas 2009

(Oshkosh, WI) Nercon Eng. & Mfg., Inc. has teamed up with Intralox ® to offer the latest in Angled Roller Belt technology. Nercon's Roller Belt Conveyors aligns cases uniformly without the use of rails which not only reduces equipment costs, but also minimizes labor costs in clearing jams or correcting stoppages.

A significant benefit of an Angled Roller Belt conveyor system is cost effectiveness. A multitude of components are not needed to accomplish the same tasks that Angled Roller Belt conveyors can accomplish in much shorter distances.

Applications for the Angled Roller Belt conveyor technology include Case Alignment, Case Turning, Centering, Singulating/Descrambling, Merging and Diverting.

The attributes for Angled Roller Belt Conveyors are:

**Flexibility** The Angled Roller Belt is modular in design. Repairs to sections can be made by pulling the pin and exchanging the section.

**Adaptability** The Angled Roller Belt conveyor systems can handle a variety of sizes and shapes of cases. Even fragile packages can be safely conveyed in this system with minimal risk of damage or breakage.

**Speed** Angled Roller Belt conveyors have been tested at sorting up to 200 packages per minute.

**Reliability** Without guide rails and complex gating, production lines using Angled Roller Belt technology show a significant reduction in breakdowns and jams.

**Low Maintenance** Fewer components result in less maintenance.

At the show, Nercon will be featuring a conveyor loop (Booth C3011) with all Angled Roller Belt applications including 90 degree transfer, sorting, diverting, horizontal switching, aligning, centering, bump turning, accumulating and metering. Angled Roller Belt conveyor applications are also featured at [www.nercon.com/TheNerconAngle](http://www.nercon.com/TheNerconAngle). White papers, videos and brochures are available for download.

Nercon Eng. & Mfg., Inc. provides turn-key solutions including design engineering, project management, manufacturing, electronic controls, installation and transportation services. Nercon specializes in packaging conveyor systems and package handling equipment solutions. Visit [www.nercon.com](http://www.nercon.com) for more information about Nercon's products and services.
