For immediate release.

NERCON'S SANITARY CONVEYOR DESIGN IS AN ECONOMICAL SOLUTION TO SANITARY EQUIPMENT REQUIREMENTS

Nercon has developed a stainless steel Sanitary Conveyor design to help food, dairy and pharmaceutical manufacturers with today's stringent sanitary requirements. A static display at Pack Expo Las Vegas, attendees can closely examine all the features that make this equipment easy-to-clean.

An important feature of this sanitary conveyor design is the ability to quickly and easily remove the conveying surfaces for access. The lift up pulley allows slack in the belt, so the plastic belt can be raised, exposing the inner frame for wash-down. No tools are required to remove and clean the carry and return wear strips. The clean out ports and extra wide frame design gives entry to all areas for cleaning. All motors, bearings and supports are spaced out from the side frame on solid welded stand offs for ease of cleaning.

Manufactured in multiple widths incorporating most plastic belt and table top chains, Nercon's sanitary design conveyor line includes straight running and side flexing components. Additional features such as drip pans, covers, retractable and tipping nosers can be incorporated into the conveyor line.

For a video tour and downloadable brochure on Nercon's new Sanitary Conveyor design, visit www.nercon.com/SanitaryConveyor.

Nercon is well known as a designer, integrator and manufacturer of packaging and process conveyors and material handling equipment. The company has over 35 years of experience in engineering conveyors, equipment and customized conveyor lines.
