For immediate release.

SIDE GRIPPER CONVEYOR NOW AVAILABLE THROUGH MODULAR CONVEYOR EXPRESS

Nercon Eng. & Mfg., Inc. now offers a pre-engineered Side Gripper Conveyor to the Modular Conveyor Express stock conveyor line. The Side Gripper is used for gap transfer, downed bottle elimination and for code dating applications. The unit is adjustable to various product widths and is available in mild and stainless steel.

Modular Conveyor Express is a product line of quick-ship conveyors that enables a system to be ready and running in days, rather than weeks. The program begins with a complete line of stock modular conveyors, complemented by pre-engineered components which make up a variety of conveyor line layouts. The extensive component variety, combined with stock and pre-engineered equipment selections allows Nercon to provide rapid delivery and value pricing for Modular Conveyor Express customers.

The conveyor families in the Modular Conveyor Express line are: Tabletop Conveyors, Mat Style Conveyors, Stainless Steel Belt Conveyors and Plastic Belt Case Conveyors. These rugged conveyors can be reconfigured as the production environment changes because they are designed to be interchangeable and versatile.

The Modular Conveyor Express website includes components specifications, video close-ups, downloadable CAD templates and interactive pricing worksheets. For more information, visit www.nercon.com and click on Modular Conveyor Express, you can also visit www.modularconveyorexpress.com!

Nercon Eng. & Mfg., Inc. is a 35 year conveyor engineering and manufacturing company specializing in packaging and process production lines and material handling equipment. More information, videos and brochure downloads is available at www.nercon.com.
